

Secure Corporate WLAN Solution with guest access

Telenor Business Solutions supplies communications and IT solutions to the Norwegian, Nordic and European business markets, with focus on medium-sized and large businesses. It develops and offers a broad range of application and communication solutions within telephony and data communications. Telenor Business Solutions' strategic objective is to be the leading supplier of communications and IT solutions in the Nordic region, and among

With a strong focus on providing secure wireless solutions to the enterprise marketplace, Telenor Business solution chose Aptilo's solution as the foundation for their new and innovative on-site secure WLAN solution, called "Trådløs Sone" (Wireless Zone).

What was Telenor Business Solution looking for?

Telenor Business Solutions was looking for a secure wireless access service platform that would enable them to provide on-site corporate WLAN services with net-centric access control, Internet access and guest services.

Substantial productivity gains

The solutions and services are designed to provide customers with a substantial productivity gain by offering controlled wireless access to the Internet for corporate employees and corporate partners visiting the corporate site. Total mobility saves time and money.

Distributed and net-centric implementation options

With the objective of providing a solution with strict security requirements and cost effectiveness for subscribing companies and users, the solution is based on a net-centric model that enables the deployment of distributed solutions to customer sites as required. This provides Telenor Business Solutions with the maximum flexibility in serving the WLAN user's requirements in this fast growing marketplace.

Unsurpassed security

Catering to internal IT organization's security concerns, the solution has to be secure but easy to install and deploy. Furthermore, it needs to be scalable and modular both in terms of functionality and scope. Another important aspect is adherence to industry standards and independence from the VPN solutions used.

Roaming and billing

The solution utilises RADIUS authentication, and is ready for future roaming with any wireless network. The solution already provides for controlled access for any authorized user at any "Trådløs Sone" customer site .

A reference WLAN-solution for the business community

"Our "Trådløs Sone" solution sets a new standard in wireless security and flexibility. The use of Aptilo's Wireless Access Solution allowed us to develop a solution that will dramatically increase employees' time online, thus enhancing co-operation, communication and efficiency. Based on our experiences implementing Europe's largest wireless campus at the new Telenor headquarters, we have developed a reference WLAN-solution for the Nordic business community."

Morten Lundal, CEO Telenor Business Solutions.

Cisco, Aptilo, Accenture and Telenor: Partners in Success

The complete solution was delivered based on technologies from Cisco and Aptilo in strong collaboration with Accenture integration services and on Telenor's comprehensive suite of communication services.

Why Aptilo?

Aptilo provides a secure solution that is both net centric and distributed. It is a comprehensive, scalable, flexible and platform-independent solution, which is easily integrated into TBS's operations and management environment.
